

FEDERICO GONZÁLEZ

Junior developer

I am studying Systems Engineering and working as cashier in Disco SA. I have knowledge in frontend design, basic API uses and database with SQL, also in graphic design, specifically vector desing. Basic knowledge of Unity, Unreal Engine and its blueprints system. I am looking for my first work experience in the information technology environment. I am 18 years old (16/11/03).

I'm in touch with the awesome programming world since I started playing to make games in Unity at 2017 viewing nodician videos on YouTube (when i started studying Java in the University I remembered those days trying to understand C# with 13 years old), then I started with Unreal Engine and I have learned the basics of its blueprint visual scripting system. I liked it, so in 2019 I completed an Udemy Unity and C# course, there i obtained a certificate. At December of 2021 (when I finished the high school) I started learning web development in YouTube with SoyDalto courses. Nowadays I am studying Systems Engineering at ORT University

Till this date, i haven't been working on any company as developer, but I've done some jobs for members of my family, like for DistribuidoresWM, an e-shop with categories, cart, login and signup system. For BT Distribuidora I made a stock control panel and e-billing system and all the branding. I also have done some projects just to acquire practice and experience.
